

# Russian Constructivism assignment

## A link to the website:

[http://emilkashout.site/Russian\\_constructivism/index.html](http://emilkashout.site/Russian_constructivism/index.html)

## Gestalt laws on my website about 'Russian Constructivism':

- Law of common region (some parts of the text are enclosed by dashed lines to connect paragraphs about similar topics)
- Law of similarity (each of the links are displayed with the same color when clicked, visited, hovering and active; each picture is displayed with dashed lines to create an esthetic theme, to connect the whole page)
- Law of proximity (parts of the text that cover the same topic are close to each other)

## Use of png image format as it:

- didn't affect the quality of images so much
- is lossless when compressing

## Fonts used:

I decided to use two different fonts on my website. One of the main headline there is a 'Lucida Sans' font to stress it more as it is telling what the whole page is about. Every other headline and paragraph is in 'Montserrat' font to make the whole text more clear. The quotes of the artists are emphasized by using the italics style and some important names of artists or main points of paragraphs are also highlighted with bold style of the font.

## Summary of my log entries from module 1 – Russian Constructivism

At first, I was following really well the things that were introduced and couldn't wait to learn more. Adding new things to my page wasn't that hard for me. I had fun designing a website in Adobe XD and came up with the idea for it quite soon. I think I understood well how to add images, caption them, add headlines and paragraphs. Although I had big issues with writing CSS. As long as adding colors and fonts didn't seem that hard, I struggled with for example how to place the image or how many pixels should the margins be. I wasn't able to finish my page the way I planned on the project in Adobe XD but I am sure that with every assignment my skills will allow me to make it more similar.
